Date of discovery: 6 th April 2021		
Details of discovery: Police dismantled a criminal network engaging in the supply, storage and distribution of medicinal products, mainly steroids. During the police operation, a total quantity of 128.048 ampoules and tablets were found and seized. The total value of the seized products is estimated over 170.000 euros.		
Especially for Humatrope (batch number D154096F), according to the MAH (Lilly), the specific batch is genuine and was distributed in the turkish market. However, the product is falsified, because the outer packaging is different from		

the original and the serial numbers on every package are the same. Laboratory testing by the MAH is pending.

As to the medicinal product Proviron 25MG/TAB, it is nationally authorised in Greece and its active ingredient is mesterolone. However, the product which was found (batch number L7A5H), is considered as falsified, because, according to EOF laboratory testing, mesterolone was not detected.

Apart from the steroids, products containing sildenafil (Kamagra, Viagra) were also found and seized. Viagra (batch number 314833201) is considered as falsified, since the information of the labelling concerning the MAH, is incorrect. It should be noted that, according to the Union Register of medicinal products, Pfizer Inc., USA, referred on the labelling as MAH, has never been MAH of the product.

Finally, among the seized products, there are products containing sibutramine. Sibutramine was withdrawn from the EU in August 2010, because, according to CHMP, the benefits of sibutramine do not outweigh its risks.
